## Notes

*1 Receiver will operate normally to -40°C. The internal battery will operate from -10° C to +50° C. All temperatures listed are ambient.*

*2 Accuracy and reliability may be subject to anomalies such as multipath, obstructions, satellite geometry, interference and atmospheric conditions. Always follow recommended survey practices.*

*3 Depends on SBAS system performance.*

*4 May be affected by atmospheric conditions, signal multipath, and satellite geometry. Initialization reliability is continuously monitored to ensure highest quality.*

*5 If your receiver has the 2.0 W upgrade, you will experience reduced battery performance compared to the 0.5 W solution.*

*6 Bluetooth type approvals are country specific. For more information, contact your local Trimble office or representative.*

*7 When receiver is combined with an SPS555H or other suitable SPS receivers. SPS855 must have Moving base option installed*

*8 Galileo Commercial Authorization  
Developed under a Licence of the European Union and the European Space Agency.*

*9 Networked RTK PPM values are referenced to the closest physical base station*

*10 This Trimble SPS Receiver is capable of supporting existing and planned GNSS satellite signals, including GPS, GLONASS, GALILEO, BeiDou and QZSS, and existing and planned augmentations to these GNSS systems.*
